

Experiment-14

Title: Creation of a Virtual Hard Disk and Storage Allocation Using VMware Workstation

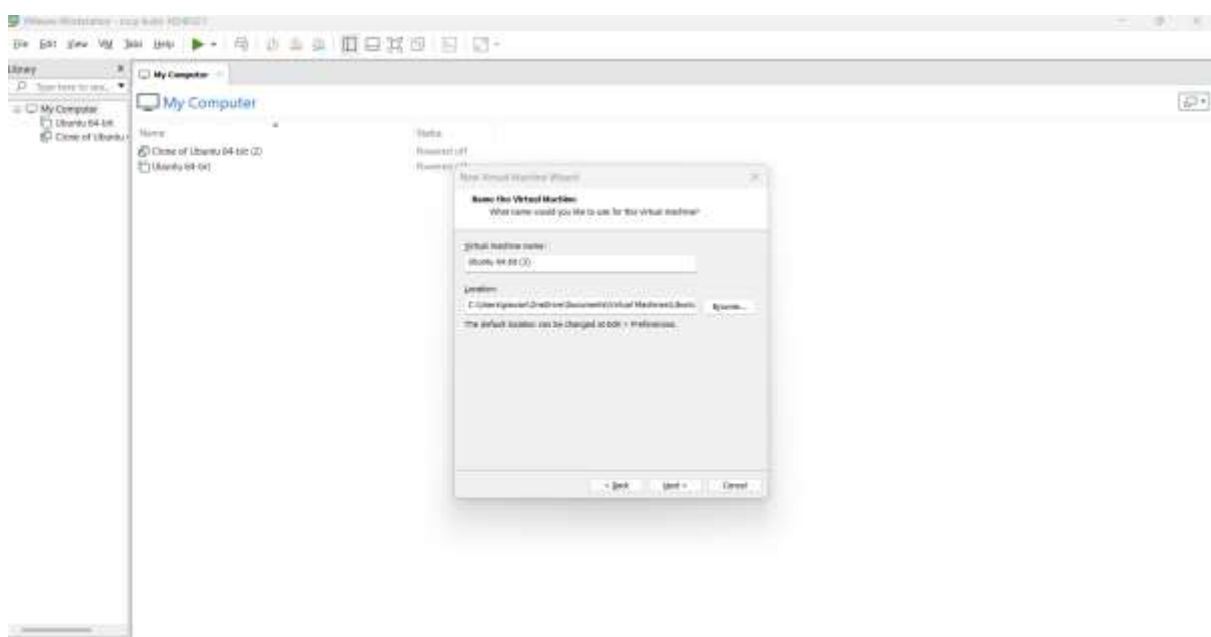

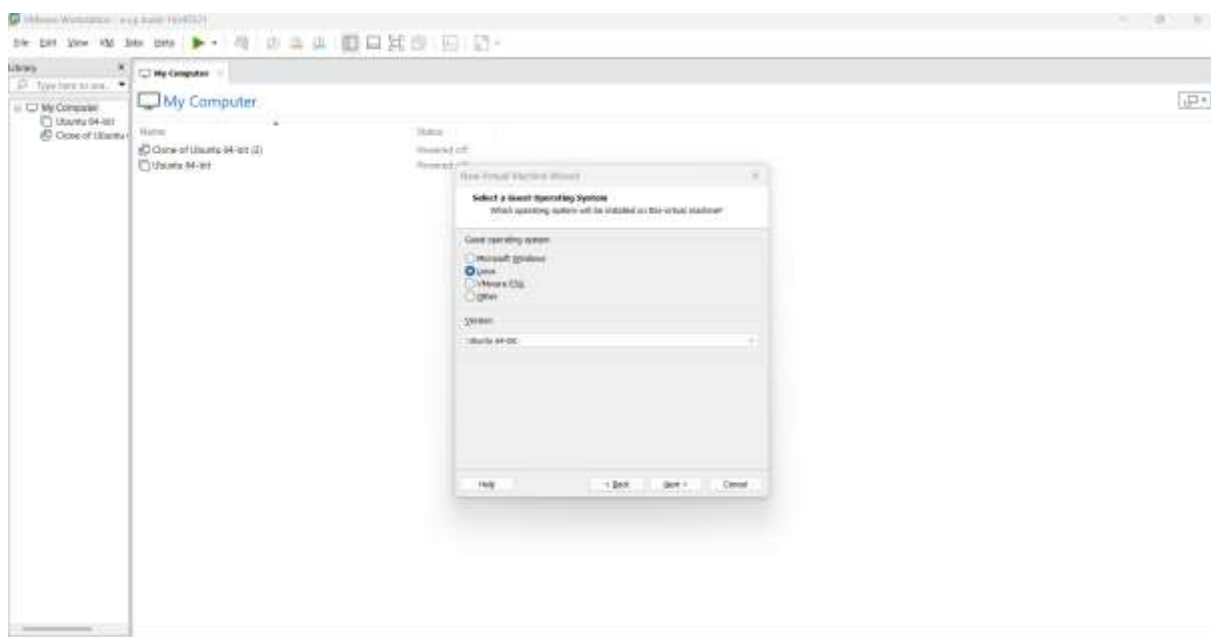

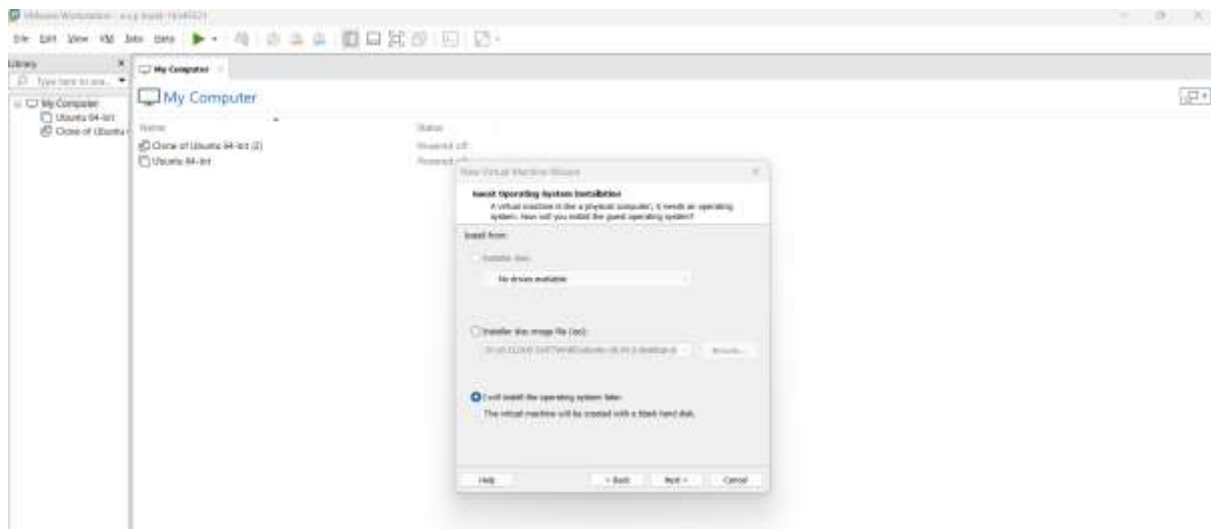

Aim

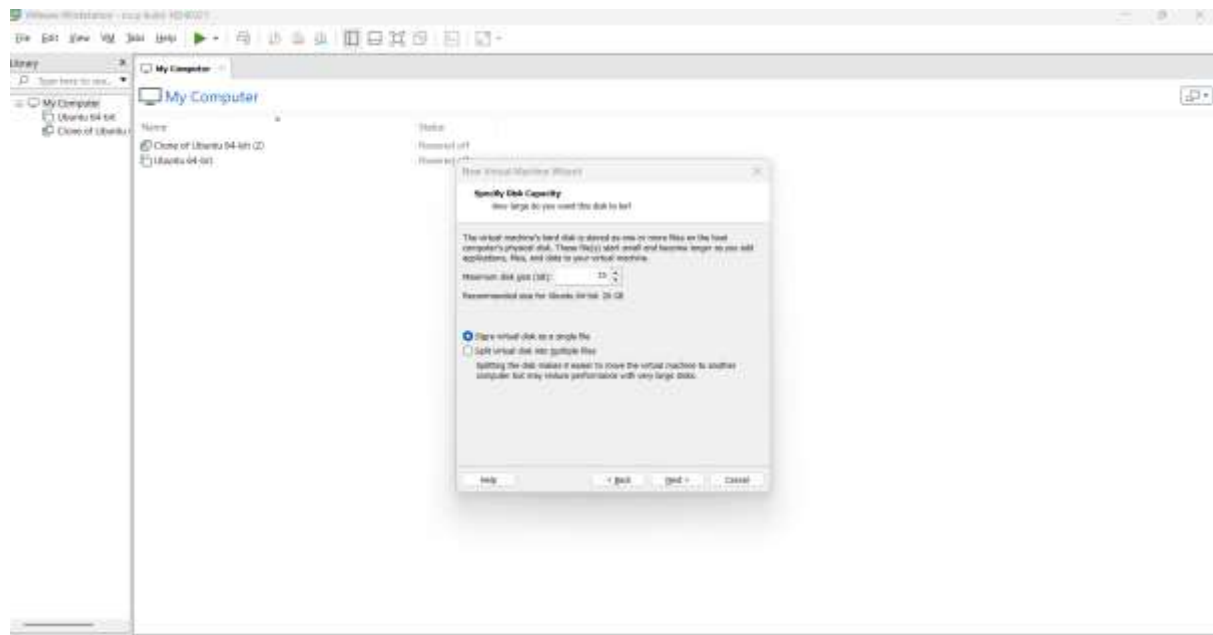

To create a **Virtual Hard Disk (VHD)** and allocate storage to a virtual machine using **VMware Workstation**.

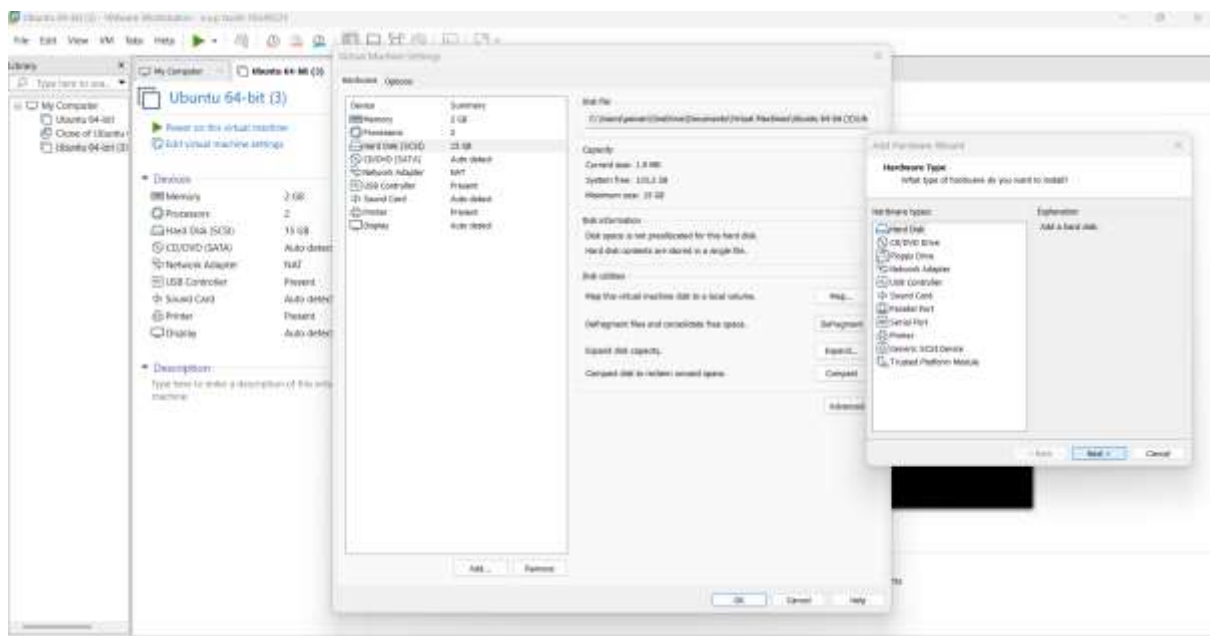

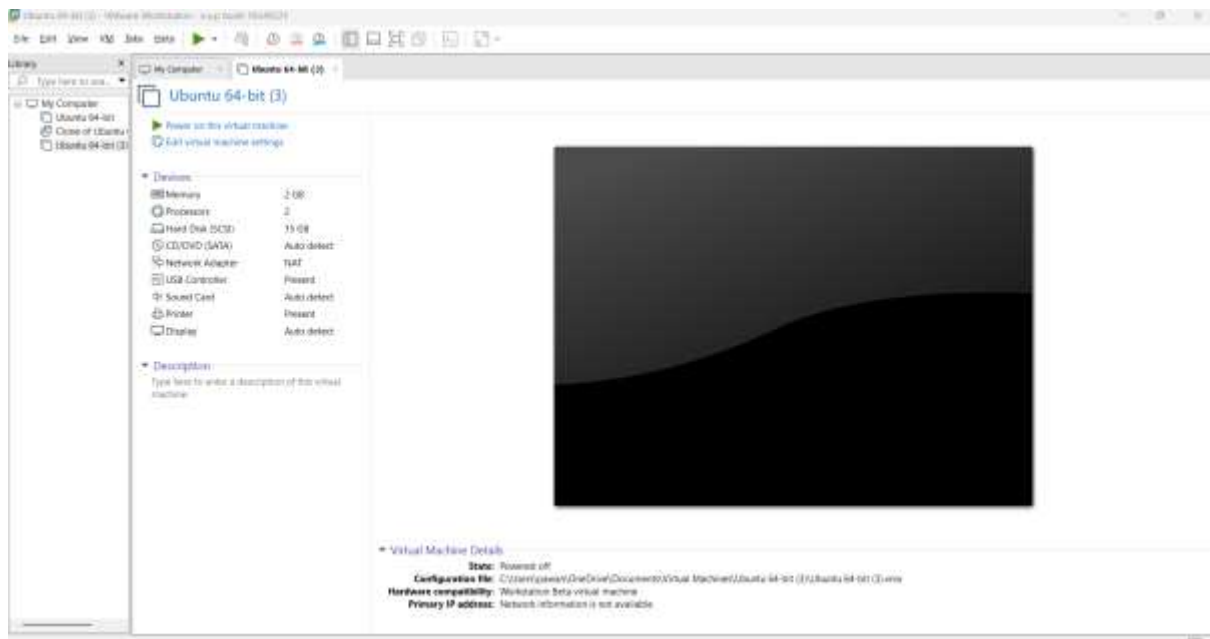

Procedure

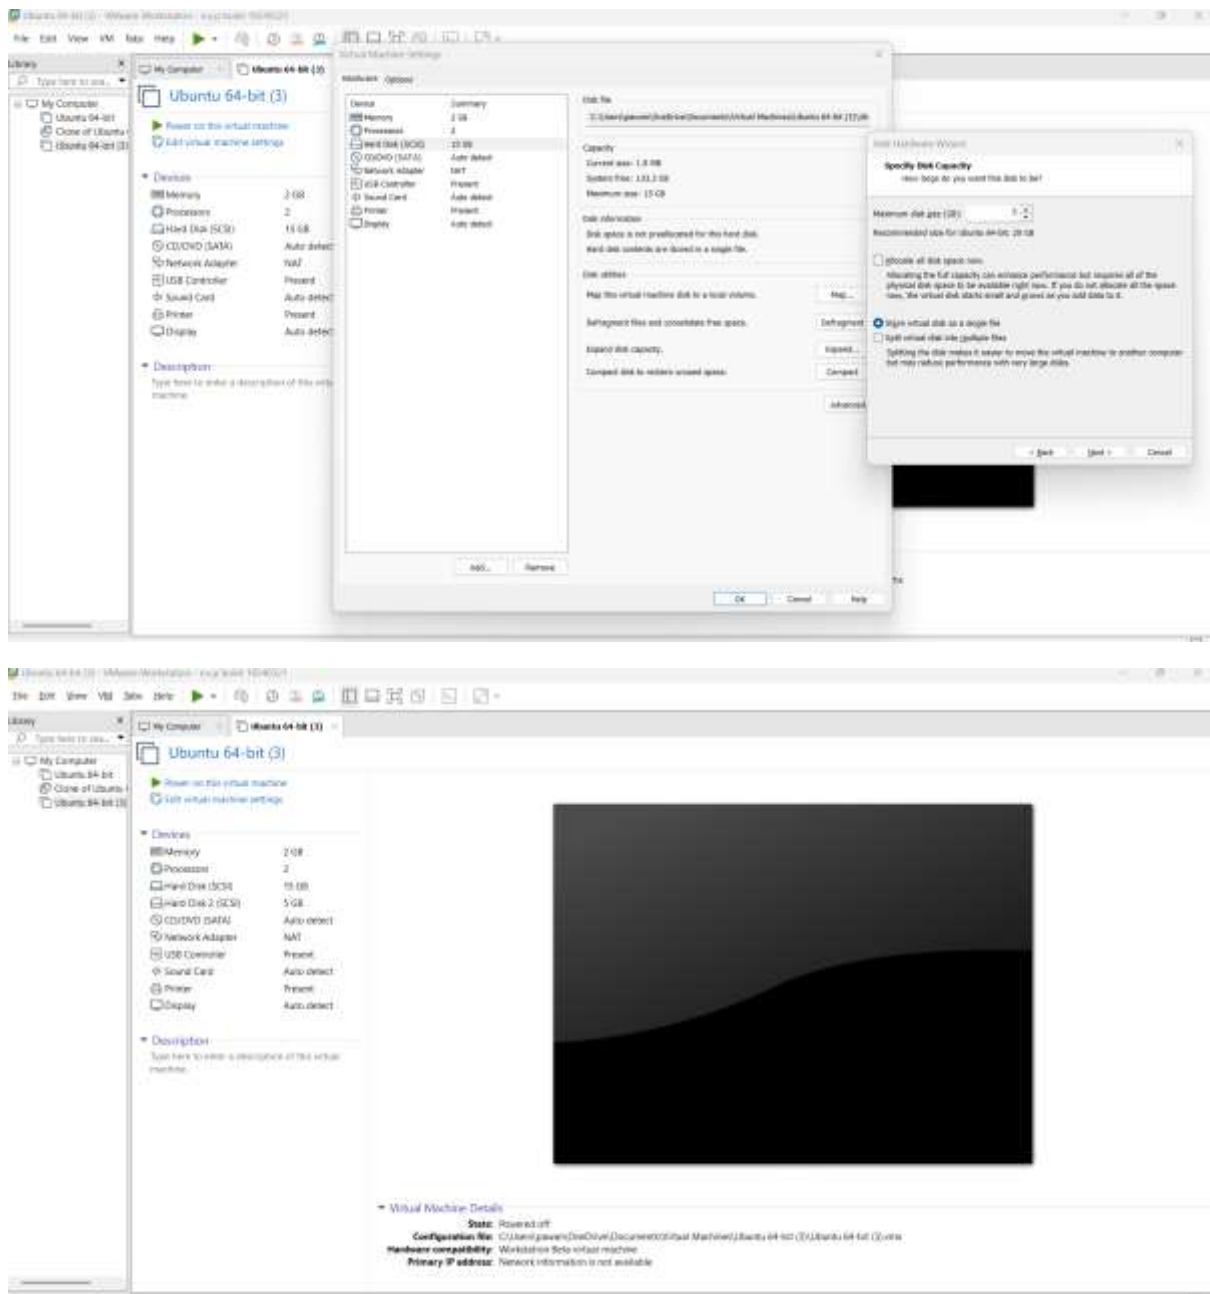

1. Open **VMware Workstation** on the host system.
2. Create a new virtual machine or open an existing virtual machine.
3. During the virtual machine setup, select **Create a New Virtual Disk**.
4. Specify the virtual disk size (e.g., 20 GB or 40 GB).
5. Choose whether to **Store virtual disk as a single file** or **Split virtual disk into multiple files**.
6. Select the location to save the virtual hard disk.
7. Complete the virtual machine creation wizard.
8. Verify the allocated virtual hard disk under **Virtual Machine Settings**.
9. Power on the virtual machine and install the guest operating system.
10. Confirm that the guest operating system detects and uses the allocated virtual hard disk successfully.

Result

Successfully created a **Virtual Hard Disk (VHD)** and allocated storage to the virtual machine using **VMware Workstation**. The guest operating system recognized the allocated storage and functioned correctly.
