Experiment 16

Title: Clone a Virtual Machine

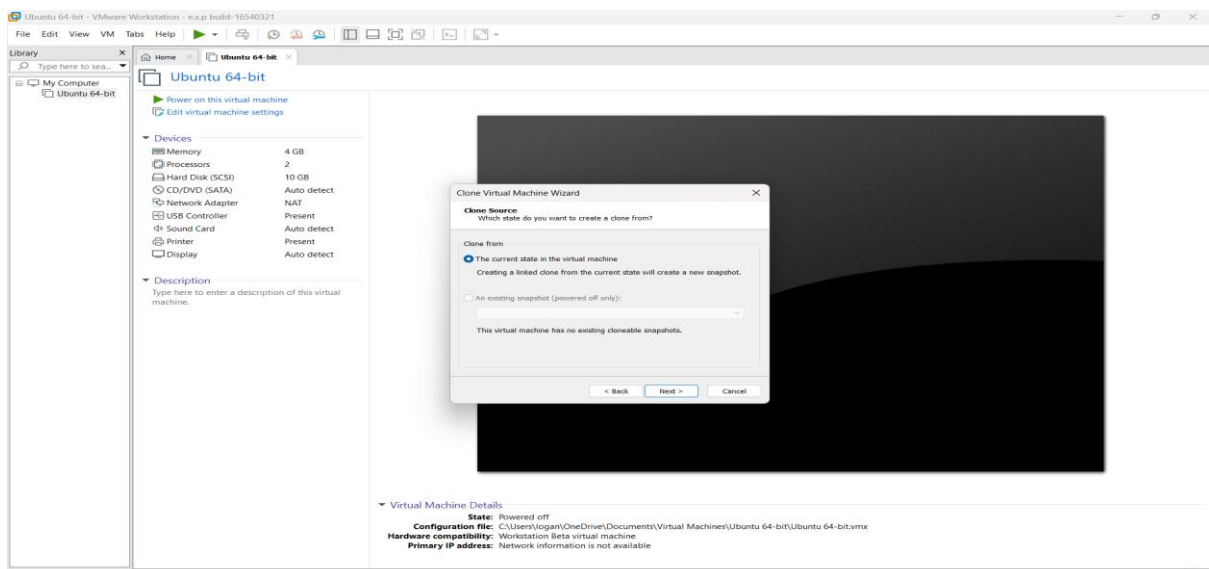

Aim

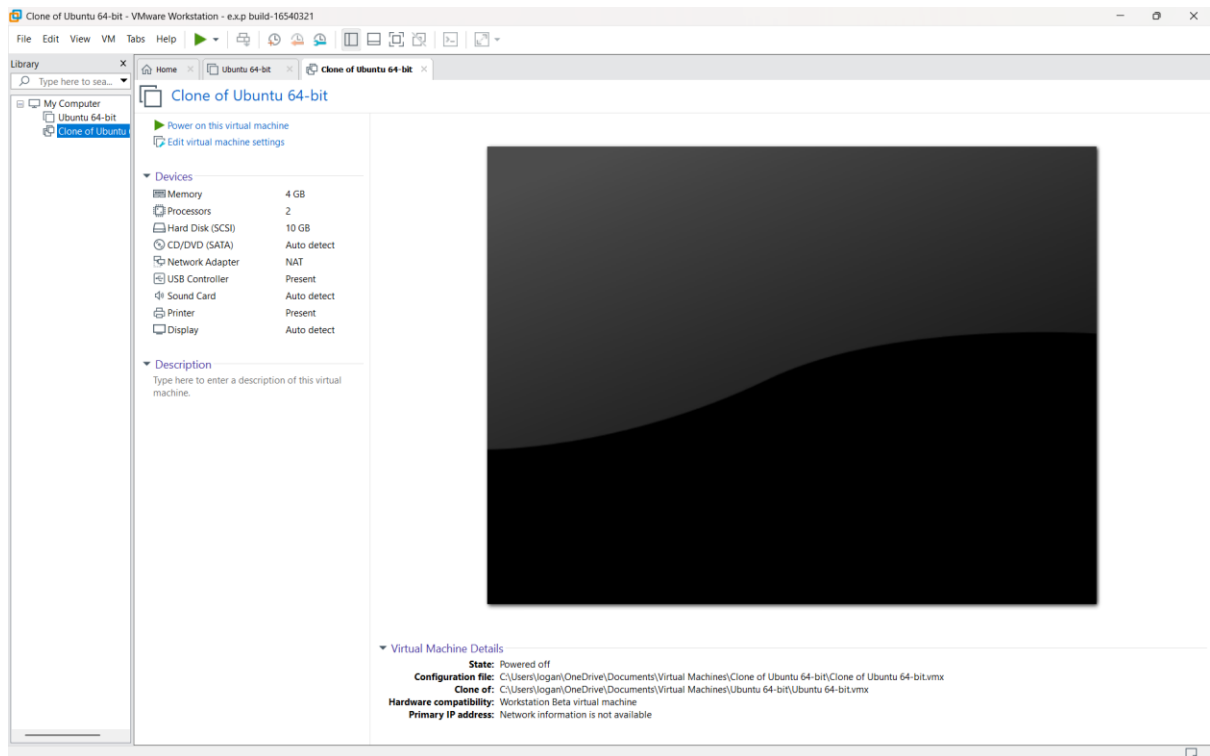

To create a clone of an existing Virtual Machine and verify its functionality.

Procedure

1. Shut down the Virtual Machine.
2. Select the VM in VMware Workstation.
3. Click **VM** → **Manage** → **Clone**.
4. Select the snapshot or current state.
5. Choose:
 - Full Clone (or)
 - Linked Clone
6. Enter the clone name and destination.
7. Click **Finish**.
8. Power on the cloned VM.
9. Log in and verify that it functions independently.

Output

Result

A clone of the Virtual Machine was successfully created and operated independently.
