## Experiment 17

### Title: Change Hardware Compatibility of a Virtual Machine and Execute UNIX Commands

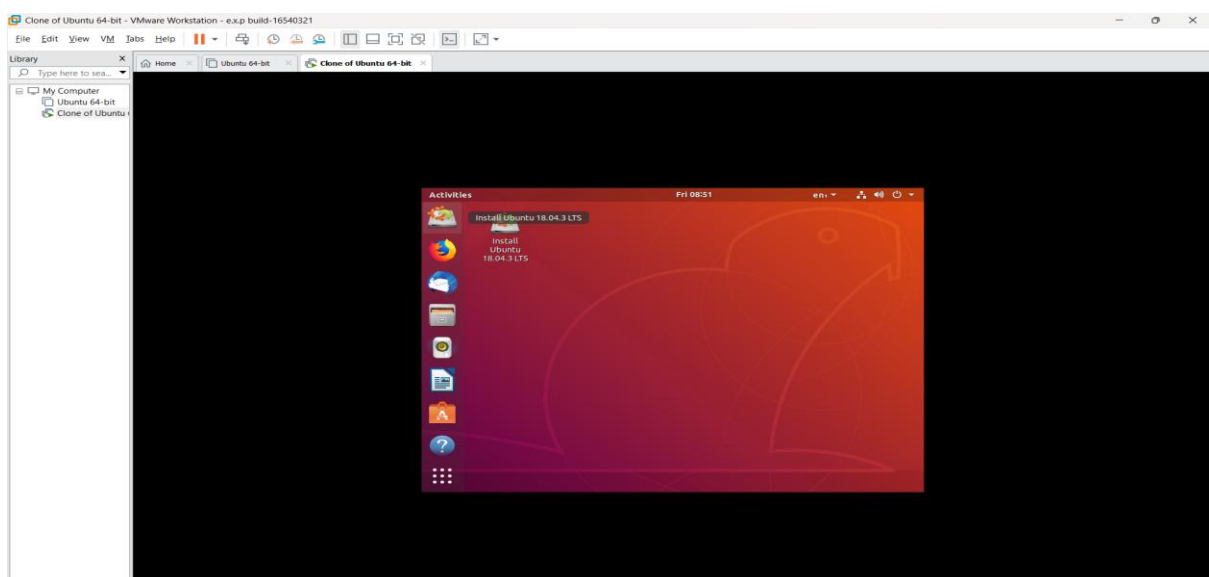

#### Aim

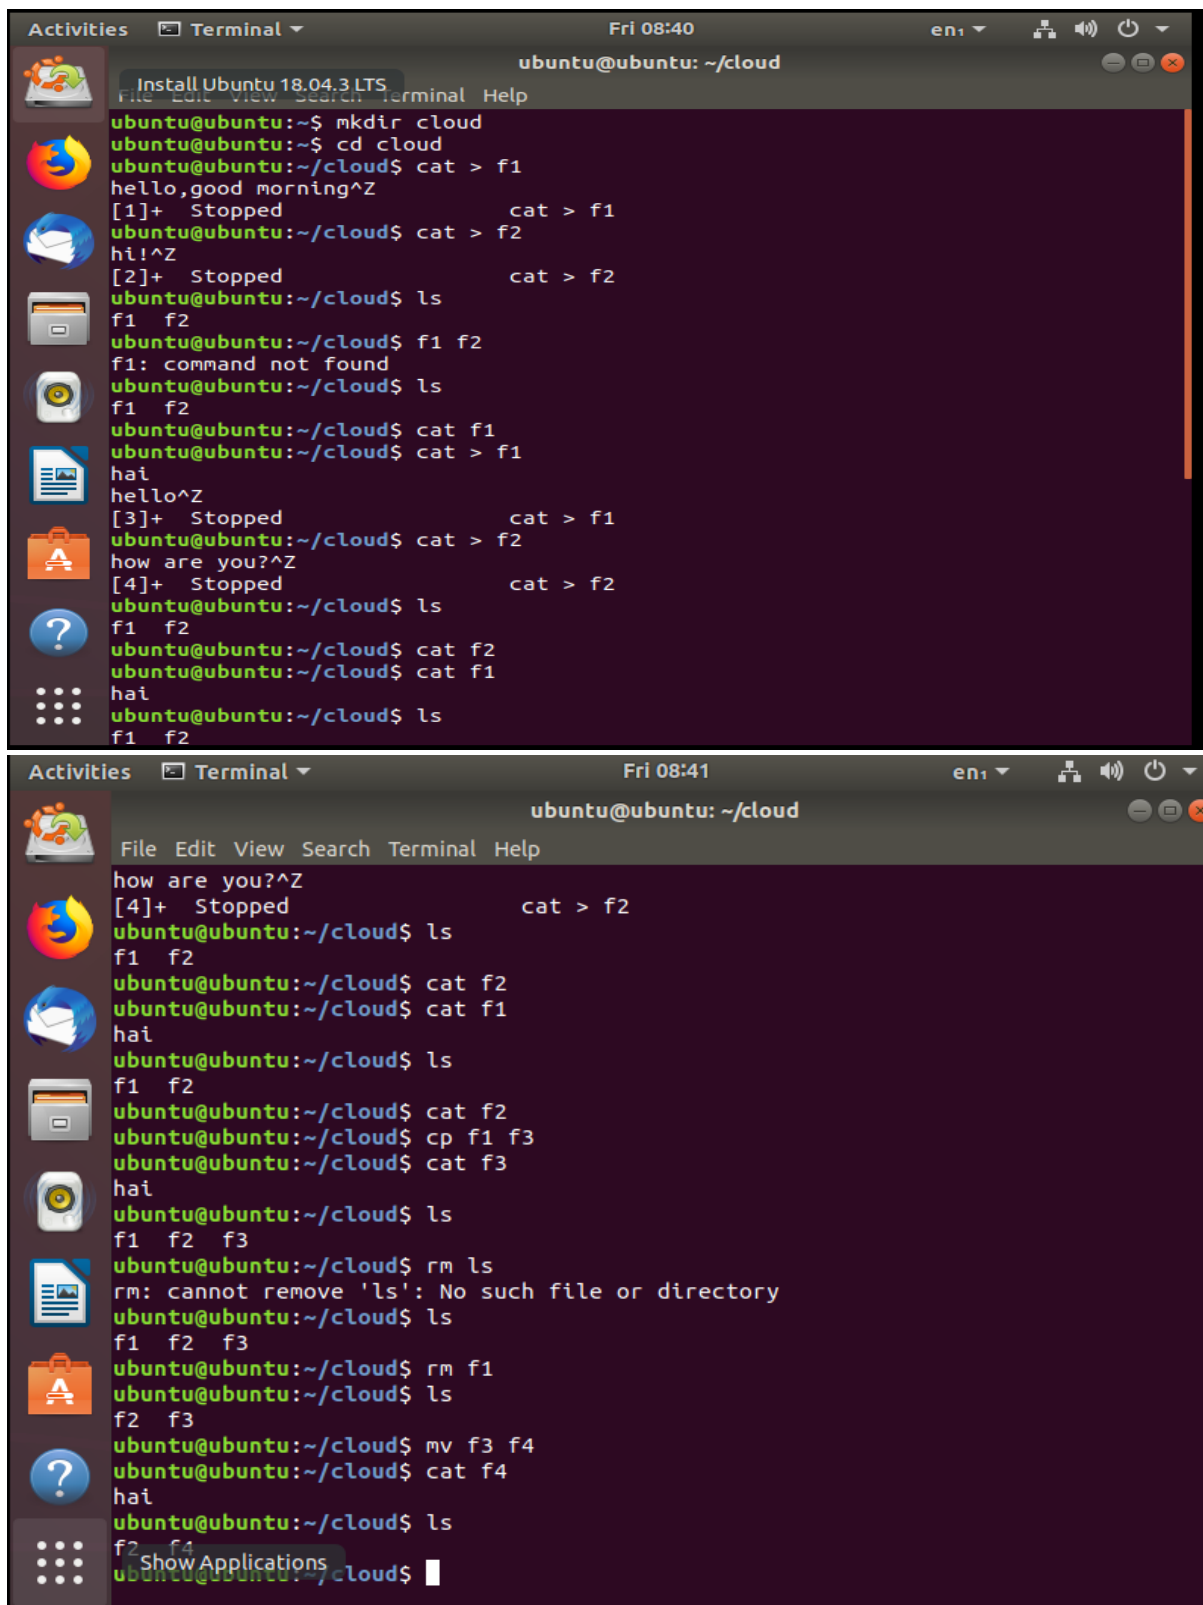

To change the hardware compatibility of an existing Virtual Machine and execute basic UNIX commands.

#### Procedure

1. Shut down the Virtual Machine.
2. Open VMware Workstation.
3. Right-click the VM and select **Manage** → **Change Hardware Compatibility**.
4. Select the required VMware Workstation compatibility version.
5. Click **Next** and **Finish**.
6. Power on the Virtual Machine.
7. Open the Linux terminal.
8. Execute the following UNIX commands:
9. Verify that the commands execute successfully.

#### Output

## Result

The hardware compatibility of the Virtual Machine was successfully updated, and the Linux Virtual Machine executed basic UNIX commands without errors.
